

Flat Tire–Lance H Carleton

Medium–Steel, copper, brass and cast iron

\$11,500

sculpture

Carleton allows his “found objects” to determine the look and scale of his sculptures. The partial loops that became the wheels are what led him down the bike path to “Flat Tire.” Once he had the idea of making a bike sculpture, it took him four months to find all the pieces he needed to finish the bike. How many recycled objects can you find in this piece? What kind of recycled things do you think would make good sculptures?
